# Ajeer Mohammed

Full-stack TypeScript engineer. I build LLM products, and the checks that let AI coding agents work safely on real codebases.

## EXPERIENCE

**SEA Media · Senior Full-Stack Engineer and Project Partner** — Remote · May 2025 to now

I lead a team of 4 to 6 developers: I plan the architecture, assign the work, review the code and mentor.

- **Enrixa Store**, a multi-tenant e-commerce platform where each merchant runs their own store on a subdomain (NestJS, Prisma, PostgreSQL, two Next.js apps; 60 data models), now live with its first two merchants. I set the tenancy model, the payments layer for Razorpay and cash on delivery, and the release plan. Most of the code is written with Claude Code, so I made the risky mistakes fail the build: a query that could show one store's data to another, or a migration that would break the running app, stops CI whoever wrote it.
- **Enrixa AI**, a shopping assistant for Shopify stores, live for an online pharmacy and handling about 600 to 700 conversations a month. It checks products and live stock while it answers, and can only show items its own search returned, so it can't invent a price. When Claude is unavailable it falls back to Gemini, and past a daily spending cap it switches to plain search. 132 tests run the real assistant against a demo store and block a release if it, for example, gives dosing advice.
- **W.I.N.S**, the Alabama Department of Public Health's infant-safety program: I led a Next.js admin and a Flutter app for parents on one Supabase database, live on the App Store and Google Play since July 2026, with 78 families registered so far. I wrote the rules that let two teams share the database without breaking each other's features, and traced a run of random Android sign-outs to two app processes refreshing the same login token.
- **Kidulan**: built a Shopify Hydrogen storefront with four other engineers, covering the full shopping flow and custom marketing pages; it now serves 10,000+ daily users across India. I owned the architecture notes and the deploy pipeline. Also **Price Monitor**, a Shopify repricing app that changes nothing until the merchant approves a dry run.

**NTAM Group (Delta Plus Event Management) · Software Developer** — Dubai · Jun 2024 to Apr 2025

- A training platform for Abbott used by more than 1,000 medical representatives worldwide, with per-region admin panels and reporting (Angular, PHP, Node.js).
- L'Oréal's event app for Android and iOS, used at 5+ live events: agendas, badge scanning, live voting (Flutter, .NET).
- For Nestlé's Ascenda launch in Jeddah, a body-tracking wall where guests watched themselves grow on a 4-metre screen; 150+ guests used it in one evening (Electron, React, MediaPipe). For Novartis, I fine-tuned a model behind a talking avatar that answered healthcare professionals' product questions aloud.

**Indus Real Estate LLC · Full-Stack Developer** — Dubai · Dec 2022 to Jun 2024

- A lease management app for 200+ units, tracking expiry, payments, cheques and maintenance (Angular, PHP, Node.js).
- Rebuilt the public property site in Next.js and cut page load time by 70 percent.

**DOSII · Flutter Developer** — India · Jun 2022 to Dec 2022

- Helped build a university admissions app that served 1,000+ students in its first quarter, and set up its unit and integration tests.

## OPEN SOURCE

- **bouncer-gates**: a CLI, GitHub Action and MCP server that stops five expensive mistakes before they merge, such as leaked keys and queries that cross tenants. Listed in the official MCP Registry. The first version flagged 45 problems on a real repository and 32 were wrong; I fixed each cause, and it now flags 13, all real.
- **estate**: a Go CLI that checks a folder of repositories for trouble. Its first real run found six months of work that existed on one disk with nowhere to push.

## WRITING

How I build software with AI agents, and What my coding agents got wrong, and what caught it (ajeer.website)

## SKILLS

TypeScript, Node.js, NestJS, Fastify, React, Next.js, PostgreSQL, Prisma, Supabase, Redis, BullMQ, Flutter, Python, Go · Claude Code, MCP, LLM evaluation and tracing (Langfuse) · Shopify Hydrogen · Docker, GitHub Actions, Cloudflare Workers, Vercel

## EDUCATION

Crossroads Software Engineering Bootcamp, India, 2020 to 2021
